

Experiment No. 18

Title

Prolog Program for a Database with Name and Date of Birth

Aim

To write a Prolog program to create a database containing a person's name and date of birth.

Objective

The objective of this experiment is to understand how facts are represented and queried in Prolog by creating a simple database with names and dates of birth.

Algorithm

Step 1: Start.

Step 2: Define facts containing name and date of birth.

Step 3: Store the facts in the Prolog database.

Step 4: Execute a query to retrieve the required record.

Step 5: Display the result.

Step 6: Stop.

Flowchart

Prolog Program

```
person(rahul, '10-05-2002').  
person(priya, '15-08-2003').  
person(arun, '22-01-2001').  
person(divya, '30-11-2002').
```

Query:

```
?- person(priya, DOB).
```

Sample Output

```
DOB = '15-08-2003'.
```

Result

The Prolog program successfully created a database containing names and dates of birth and retrieved the required information.

Conclusion

Thus, the Prolog database was successfully implemented using facts, and the required records were retrieved through queries.
