

Experiment No. 19

Title

Prolog Program for STUDENT–TEACHER–SUBJECT CODE Database

Aim

To write a Prolog program to create a database containing student, teacher, and subject code information.

Objective

The objective of this experiment is to understand how Prolog facts can be used to represent and retrieve information from a simple student–teacher–subject database.

Algorithm

Step 1: Start.

Step 2: Define facts for student, teacher, and subject code.

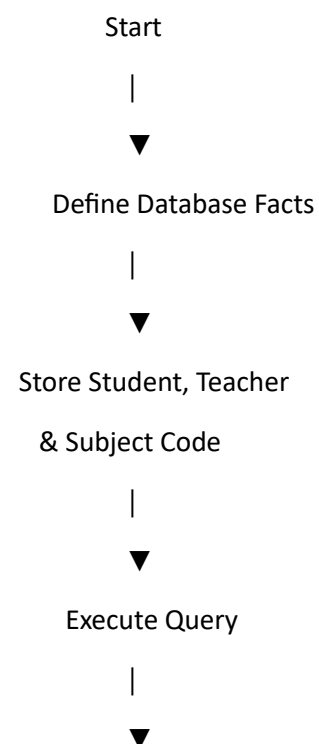

Step 3: Store the facts in the Prolog database.

Step 4: Execute a query to retrieve the required information.

Step 5: Display the result.

Step 6: Stop.

Flowchart

Display Result

Stop

Prolog Program

```
record(rahul, ramesh, cs101).
```

```
record(priya, suresh, ai201).
```

```
record(arun, kavitha, cs102).
```

```
record(divya, meena, ai202).
```

Query:

```
?- record(priya, Teacher, SubjectCode).
```

Sample Output

```
Teacher = suresh,
```

```
SubjectCode = ai201.
```

Result

The Prolog program successfully created a student–teacher–subject code database and retrieved the required information.

Conclusion

Thus, the Prolog database was successfully implemented using facts, enabling efficient storage and retrieval of student, teacher, and subject code information.
